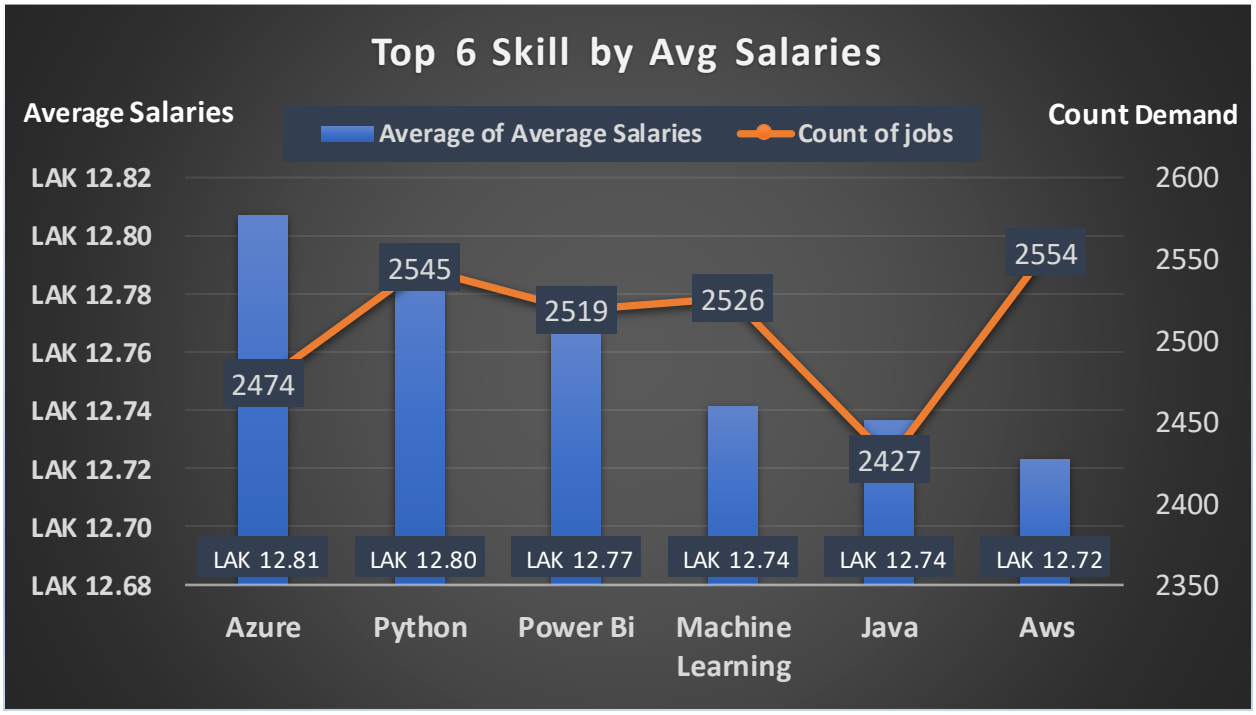
Executive Summary & Career Guide

Top Recommended Jobs:

ML Engineer, Data Scientist, Cloud Engineer, DevOps Engineer, and Cybersecurity Analyst are among the highest-paying jobs in the Indian market.

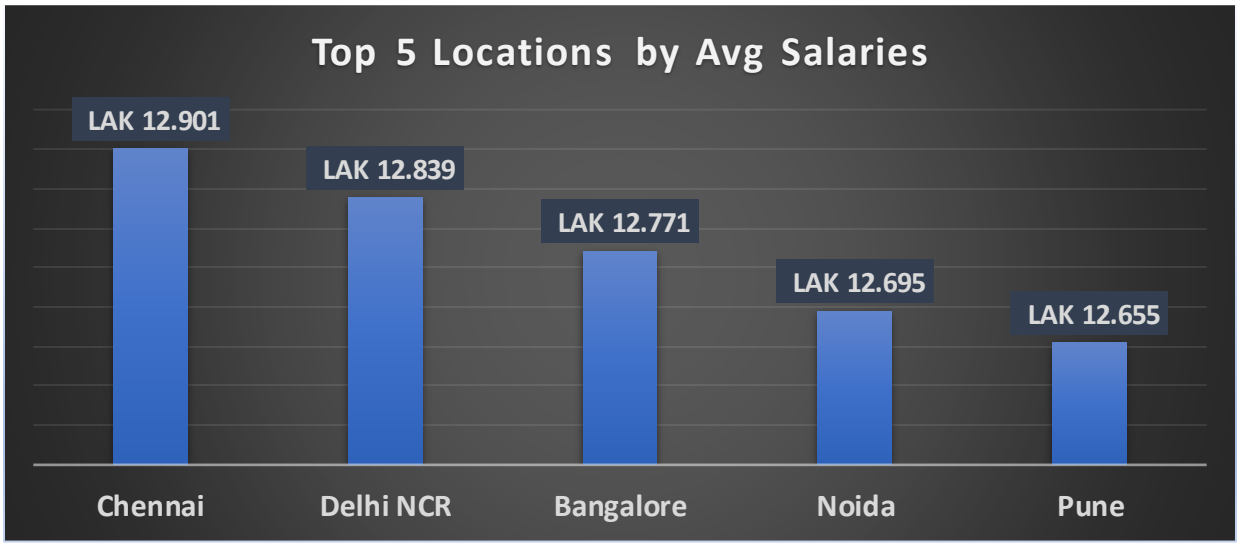


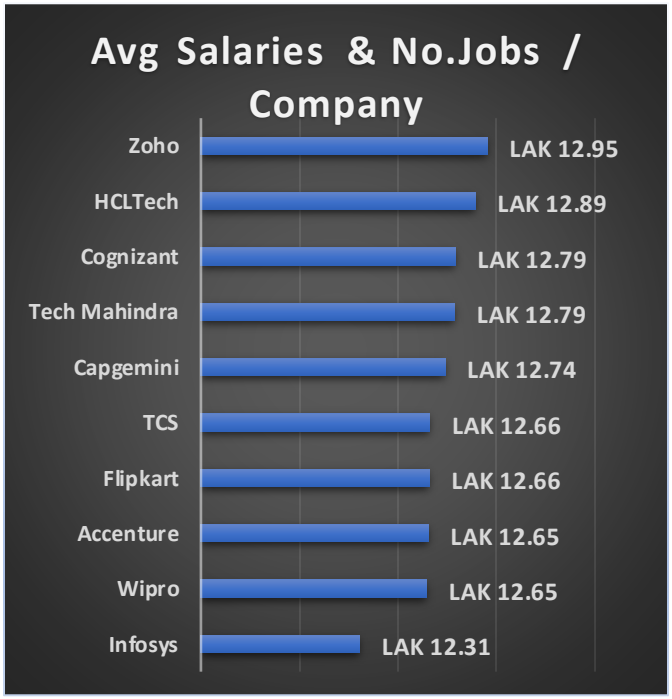
Work-Life Balance:

If you're a high-performing employee striving for excellence and advancement, and you can tolerate the hustle and bustle of major cities and their high cost of living, some of the best companies in this field are **Flipkart, HCLTech, Zoho**, and **Accenture**.

These companies are leaders in major cities like **Chennai, Kolkata, Bangalore, Hyderabad**, and **Mumbai**.

If you're looking for a more affordable lifestyle, **Kolkata** is an excellent option, as **Zoho** is also a leading company there and a top performer in major cities.





A guide for researchers based on their level of experience:

[1] If you are new to your field [Junior]:

There is an opportunity to work as a junior graduate to earn a higher salary than those with average experience, but overall demand is lower than average experience.

[2] If you have average experience in the field [Med-Level]:

You have numerous job opportunities as more than 30% of the market demand is for average experience, but you may earn a relatively lower salary than a beginner.

[3] If you are Senior or above:

You have high demand for jobs that are competitive with those with average experience, but with the advantage of higher salary. However, if you are a Leader, there is relatively high demand for Leader positions, but with lower salaries. For beginners, this is an unfair choice.
